

Fee Structure for CAT₄T Hyperthyroid Patients

- 1) Standard Release Protocol: \$650.00 for therapy and two nights in the CATT facility.

If your cat is measured at above 0.2mR/hr after the initial two days and you do not wish to follow the "Early Release Protocol" for waste disposal you may leave your cat here for an additional two days until it measures below 0.2mR/hr. There is a fee of \$75.00/night for each additional night.

- 2) Extended Release Protocol: \$1400.00 for therapy and two week isolation in the CATT Facility.

This protocol is at the client's discretion and is advised for cats with litter box avoidance behavior. It is also valuable for homes where there are young children that cannot follow the "no contact" instructions or if there is a family member that is pregnant. These patients are released after two weeks with very low levels of measurable radiation.

For all patients, a \$300 deposit is required at the time of scheduling and the balance is due at the time of drop-off on Wednesday morning. Payment is by credit, debit, cash or money order. We do not accept personal checks. Deposits are refundable up to seven days in advance of the scheduled treatment date after which there will be no refund.
